Fixturlaser XA Pro – Redefines the Standard for Laser Based Shaft Alignment

At its launch a few years ago, the Fixturlaser XA definitely set a new standard for laser based shaft alignment products. With the introduction of new technology in both hardware and software, this alignment tool took a huge innovative technology leap forward with regards to its user friendliness and the once so time consuming task of performing shaft alignment. The Fixturlaser XA Pro is a new and improved successor to the Fixturlaser XA with more new features and more content that will make your every day maintenance job a lot easier.

Fixturlaser XA Pro Hardware

As for the hardware, a completely new set of measurement units were introduced, large 30 mm CCD detector surfaces and line laser, which practically eliminates rough alignment.

The fact that all Fixturlaser shaft alignment products use two measurement units combined with their technological features, increases considerably the measurement accuracy. You can sample up to 693 measurements in each position giving in total 2079 points for calculation of a possible misalignment. Also, the CCD sensors allow for digital signal quality control, further enhancing the measurement accuracy. To increase the mobility around your work site, the Fixturlaser XA Pro's measurement units are equipped with Bluetooth units, i.e. wireless connection. The display unit is one of a kind in the market as it is fitted out with the largest color touch screen available, a whole 6,4" in size.

Fixturlaser XA Pro Software

The Fixturlaser XA Pro has an "All Inclusive" shaft alignment software package, which will handle most of the problems that can occur in the machine park. You will have no unpleasant surprises after the time of purchase with additional charges for e.g. unlimited storage space, machine train alignment, base and bolt bound situations, hot check, etc.

The intuitive user interface is animated thanks to the integration of 3D Macro-media® Flash™ technology in the display unit software. It guides you throughout the measurement and alignment process, using color coded icons, symbols, and measurement values, thus eliminating any possible language barriers.
